## Many people believe that the use of new technology improves lives of employee. Others think that it is a disadvantage for them. Discuss both view and give your own opinion.

An array of individuals assume that exerting new technologies has facilitated <u>life</u> of people hired in work places such as companies and factories. Some others assert vice versa. From my point of view taking <u>advantages</u> of the newly created ways of doing work predicated on computerised systems <u>are</u> significantly <u>outweigh(/more beneficial than)</u> previous <u>ones</u>.

First and foremost, that technology has promoted some small home grown companies to <u>a</u> large corporation is undeniable. In other words, taking benefits from their technological <u>equipments</u>, <u>employee</u> can do their jobs strictly. Not only does it make workers free from the burden of doing a tedious and repetitive task, but also they may carry out the duties easily. The case in point is accountants working with numbers <u>most time</u> and it <u>lead</u> to them growing exhausted in regard <u>with</u> doing such an arduous task regularly. Further and even more importantly, only when members of a work place do their work through high-tech devices, can they finish their jobs in a high speed. Last but not least is associated with cost saving. To elaborate, purchasing a <u>software</u> or an instrument, employers can reduce the number of recruited people <u>that</u> leads to allocating less money to insurance centers or as a salary monthly.

On the other hand, opponents opine that the technological progress has made people isolated. It means that they tend not to socialize with others and do their jobs on their own. It could be to the detriment of either their personality or the quality of their work.

On the whole, I, personally, believe that technological progress has facilitated our life and working with these tools should be taught at school.
