

## Increasing the price of petrol is the best way to solve growing traffic and pollution problems. To what extent do you agree or disagree? What other measures do you think might be effective?

These days, air pollution and traffic jam are two crucial issues for every metropolis. There is no doubt that both mentioned problems directly are related to how has been formed its infrastructures which is an important part of each city. In my opinion, this agreement matter has different aspects to tackle with and just simply rising in fuel cost is not a proper solution to remove the pollution from air or control traffic congestion. In the following, possible approaches for solving these issues are discussed.

The presence of private car especially during rush hour is an inevitable condition which blocks all of the main high ways. However, imposing expensive price on fuel is useful to decrease the number of cars; it is not absolute and more practical task to do. There are a lot of inhibitors to stop having traffic jam in a city. For instance, amending all fleets of public transportation and also adds some new and modern one. Not only should authorities pay attention to public transportation, but also there is a need to expand and create new roads and highways.

To deal with air pollution we require to use alternative sources of energy such as renewable and natural one which cannot add pollutants and aerosols to the air. To encounter this policy all companies or manufactures which work in the electrical and Nanotechnology area should be persuaded to cooperate to apply produce or extract these alternative sources of energy.

To sum up, all petrol products are fatal and unreliable. For far future we will have to replace all sources of current energy with renewable one without ending. All these facts are essential for having a sustainable development in society. At the end, it should be considered to solve the issue of traffic congestion. There is a necessity of collaborating between citizens and mayor to face with exceeding vehicle instead of bicycle or public transport.
