The internet allows us to stay connected with each other no matter where we are. On the other hand, it also isolates us and encourages people not to socialize.

To what extent do you agree or disagree with these statements?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.

In <u>todays'</u> technically advanced days, the internet has become an indispensable tool for our daily lives. Although it decently meets an array of our needs, inevitably it <u>exposes</u> ~~copes~~ people's lives with adverse impact<u>s</u> both in personal and social dimension<u>s</u> of behavior.

~~There~~ <u>it</u> is widely accepted that<u>,</u> Interfering <u>of</u> the internet in <u>the</u> majority of spheres of lives, has made people addicted to it. They do ~~their~~ all of their chores with this phenomenon. At first glance, it has offered <u>a</u> more straightforward life. In terms of social interactions, there are numerous application<u>s</u> in mobile phones which offer people so simple a path to be in touch with their family and friends all over the world. They not only can hear their voices much better than cellular connections, but also ~~do~~ they make easily video calls. It, however, may cause loneliness to build up, on account of virtual connection. That is to say, they mostly prefer to effortlessly be in touch through the internet rather than to meet up face-to-face; therefore, they predominately experience ~~solely~~ <u>lonely</u> lives.

By the same token, interacting with friends via the internet<u>,</u> could bring a large number of misunderstandings, resentments, or even quarrels. To rephrase, if the connection has been lost, the other party would think that it was a deliberate action. Besides, even if there has not been any impediment with the connection, maybe long-distance communication would bring these grudges. This is owing to the ~~emersion~~ <u>impression</u> humans make when they meet each other in reality, which is not tangible through virtual communications.

To conclude, apart from the simplicity in daily communication made by the internet, this progress comes at the noticeable costs which could not be neglected. Virtual interaction among people would ~~grow~~ <u>create</u> dozens of social problems, and hence <u>it is</u> not reliable.
