In some countries . many people do not have enough money to access the internet.

Should goverments be responsible for ensuring that everyone can get access to the internet?

Nowadays internet plays an important role in our daily life. We can shop almost shop anything from the internet . where ever you walk in , you can use all the facilities with your cell phone's wifi

In this essay , i am going to explain my idea

Firstly , I want to mention that techology and internet is taking over the world

the growth and popularity of the internet is insane and fascinating

Barely you can find a home without the internet or a cellphone which doesnt offer mobile data

Another point to make is the data which internet offer us . you can easily search the data you want and you can download it and keep the information forever

Imagine how hard is it when you cannot use the internet .

In my point of view i think goverments must provide the citizens with the best form of any item

They are the ones who will get the most benefit out of it. While extend it for the people , they can easily receive tax and make more profit.

Secondly , not only goverments can profit from it but also they can make our daily basis facile . You caln transfer money from your mobiles easily and it helps you save time from not going to your local banks

Although , goverments can have an easy access to our imporant info and it can attack our privacy but i think having it has more benefits than not having it

In conclusion , i think its every and each goverments' duty to supply the facilities which makes life easier
