Nowadays the way many people interact with each other has changed because of technology.

In what ways has technology affected the types of relationships people make?

Has this become a positive or negative development?

In this day and age, the reason why the way of people's interactions has changed is that technology has developed increasingly. By expanding ~~the~~ usage of technology into the whole world, the types of making relationship among people gradually have become various. Although~~,~~ in many cases development of technology has made life easier for people, in some others it has created some problems. I am going to consider~~ing~~ both advantages and disadvantages. I prefer, however, to follow the positive side of it, as a fan of technology developers.

Actually, that technology has some negative effects is obvious for everyone and no one can argue about it. For ~~instant~~instance, by growing technology day by day, people's face to face interaction ~~have~~ has become less in comparison to the past and people prefer to contact each other ~~with~~ via social network~~s~~ applications instead of meeting face to face. Moreover, some hackers steal people's private information such as pictures, letters or information of bank account~~s~~ and use them against those. Thus, if people do not keep their information safely, it may become a serious threat for them.

On the other hand, I believe, the benefits of using technology are ~~rarely~~ nearly more. For example, when it comes to talking about the advantages of technology, mobile~~s~~ play a key role because many a parent is living far away from their children and ~~are~~ is not able to meet them from near, so they can use social media to contact them, even to have video call providing face to face contact from long distance. Furthermore, the internet which is a new part of technology, let~~s~~ doctors ~~to~~ have some surgeries ~~in the~~ worldwide from long distance by cameras and other instruments, hence my positive opinion about the existing and growing technologies.

Consequently, having extremely developed during these ages, technology has both pros and cons like everything. Not only do people achieve some benefits by using technology, but nowadays people's lives are more dependent on it, somehow, if people cannot use it, they will face many problems in ~~the~~ society.
