

It is generally believed that the internet is an excellent means of communication but some people suggest that it may not be the best place to find information. Discuss both these views and give your opinion.

Nowadays, through modernized and computerized lifestyle, using the internet has become indisputable means to cope with all special task and routine chores. Additionally, all of the social applications have been prepared to pave the way for simplifying interaction of human all over the world. It is clear that, although, the usage of the internet has a lot of benefits, this may has some drawbacks too which do not outweigh the advantages, in my opinion. Some advantages and disadvantages of the internet with the importance of that will be discussed.

On the one hand, internet has boosted the communication trend between people from around the world and has eased the way for contacting people virtual face to face. But this efficiency is controversial. Because, not only do prevent people from mobility, but also this issue put obstacle in the way of individuals not having a real contact with each other in the real world when there is no limitation to have real interact. All of information has been known about some sort of technology like video call is limited to merely virtual face to face communication between ordinary people, while doctors have profit to do some special surgery by this.

On the other hand, when it comes to finding out information the internet is known as a huge database. There are a lot of useful sites in enormous variety subjects. Recently, by the computerized education system, there are countless sites which have the answer key for student assignments that are not recommended. Student who using these sorts of sites will become lazy and maybe the sites will misinform pupils or have biased opinion which is not approvable at all. Besides, there are numerous sites whose information are not up dated and written by non-specialist individuals.

All things considered, I must say that the benefits and harmlessness of all kinds of tools depend on how these are used and in which ways. From my point of view, I believe that the essence of the internet is beneficial and must take into account as a necessity for modern society.
