Some experts believe that it is better for children to begin learning a foreign language at primary school rather than secondary school.

Do the advantages of this outweigh the disadvantages?

There is a controversial debate over the topic whether learning second language at early ages or postpone it to adolescences. Some argue opine that the best time for learning new language is childhood while other believe that secondary school is much appropriate time to start learning new foreign language. In this essay, I will discuss the merits and demerits of both points of view and clear my side.

In this era, <u>with</u> considering fast <u>growth</u> of technologies and new sciences, communicating with other people is one of the vital <u>ability</u> that mankind <u>need</u>. The basic and essential way to communicate is learning new language at an early age. According to new <u>science</u> research, the years before puberty <u>is</u> the crucial period <u>that</u> our brain is ready to learn and accept new materials in the fastest way, so learning two or three foreign languages at elementary school is obviously one the best way to tackle this issue.

On the other hand, some individuals believe than learning new language must be at secondary school. During childhood our hobbies trend playing with plaything or going to camp to learn new courses. By learning new language at primary school not only should they learn mathematics and physics but also they are forced to spend time to learn new languages. By learning new language at secondary school, children have so many leisure times for play with other same ages.

To put <u>in</u> it in <u>the</u> nutshell, the overall advantages <u>weigh</u> of learning new languages at primary school are more than <u>the</u> disadvantages and I strongly believe that this method is the best and <u>most</u> effective way to start learning new languages or <u>sports</u>. When we grow up, the ability of our brain to accept new science is <u>decrease</u> dramatically.
