

Some people say History is one of the most important school subjects. Other people think that, in today's world, subjects like Science and Technology are more important than History.

Discuss both these views and give your own opinion.

Schools are facing a controversial issue as to which courses are more beneficial to children and in this context, History sometimes is seen as a less important subject than Science and Technology. This article reviews the benefit of both courses while giving the writer's idea about this issue.

There is always a saying that everyone must know about his-their past and where he-they comes from. Being familiar with history of the country and the world helps humans have a better impression of what is going on in their surrounding world. History reveals not only the reason of countries' success but also the root causes of their failure. This provides invaluable lessons which can be applied by every individual to their life. Meanwhile governments' officials are able to reap the benefits of historical information and take them into account in their decisions.

On the other hand, in this day and age, no one can ignore the importance of science and technology in human's life. Compared to other subjects presented in schools, Science and Technology are more acceptable in parents' view. These courses provide the builders of the future the opportunity to be more engaged in new science from early ages and help them, as they get older, decide the major they want to continue at university.

In conclusion, although the benefits of History courses and having information about your past are not covered to anyone, I, personally, believe that Science and Technology subjects are more necessary to-for nowadays-today's kids and more time must be allocated at schools to these courses.
