

Some people say history is one of the most important school subjects. Other people think that, in today's world, subjects like science and technology are more important than history.

Discuss both these views and give your own opinion.

To be educated, children have to study some subjects in the schools. Since those kinds of studies make children ready for the future, people pay special attention to them. However, some people cite science and technology as the most beneficial parts of the schools, while others disagree with ~~them~~ and believe that history is the main one. In this writer's view, even though both of them are essential, the former have greater plus points.

In one hand, history is quoted as the most significant topic in the schools. This group believes that our today's life is inextricably bound up with history and seldom can we develop our identity without considering the past. Therefore, history is of high value on children's development and that is why we should mainly focus on this subject. Moreover, history functions as a mirror in which every body could learn as much valuable information as possible, rising individuals' awareness about their life. My firm conviction is that teaching history is a necessity as well as other courses and noting its advantages, both teachers and parents should place value on it. However, there are some fields of study that are of higher importance like science.

On the other hand, many a person, nowadays, finds science and technology much notable than history. In this rapidly changing world that we face technological and scientific breakthroughs more than ever, the significance of those kinds of subjects is undeniable. In other words, owing to some highly contentious issues like environment, increased population, food supply and the economic situation, history is far less important in comparison with science and technology that can find a solution for tackling above-mentioned problems.

In conclusion, I subscribe to the view that science and technology are deeply influencing our life and there is no solution, but to concentrate on them. To put it simply, although history is a fundamental part of children's study, the development of science and technology could pave the way for the future people through creating a better place to live.
