

Do you agree or disagree with the following statement? In today's world, it is more important to work quickly and risk making mistakes than to work slowly and make sure that everything is correct. Use specific reasons and examples to support your answer.

Speed is one of the important factor of the modern life. Chief aim of living in high speed technology era is accessing to everything as fast as you can. The inevitable outcome of this life style is doing your work quickly and attention to less details.

On the plus side, I partially agree with this life style. Simply put, the rate of development of technology have us to work more quickly with the risk of making mistakes. Every person who wants to win this race must adopt to the pace of modern life. For example if you were into science, you should consider that it is the matter of days and hours to publish your work instead of losing it to another scientists who may live in other countries. Admittedly, the innovated ideas are limited and developing them is the only key to success. Winner is the person who enrich his idea faster and sooner. I have an awful experience to prove me right. My group could have published an article in one of the famous optic's journal, provided we did not waste so much time on being perfect.

On the other hand, the downside of rapid work cannot be ignored. This hastiness ruins the pleasures of life. Everyone force themselves in an unavoidable race. Nowadays technology make people believe this is the only way of living. Every day you wake up to do a routine to-do list quickly in order to achieve more. They do not aware that less attention to details can ruin an-some otherwise excellent work. Another compelling argument against of having high pace in jobs is that being correct in everything has its own joy. Every individual must taste the flavor of being perfect without even a tiny fault.

To sum up, considering the points discussed above, the most rational conclusion to be drawn is that advocating of working quickly in the scientific realm is reasonable. However, in routine life rob people from enjoying of perfectionism.
