Using a computer every day can have more negative than positive effects on <u>young children</u>.

Do you agree or disagree?

Today, using a computer has <u>been</u> become <u>a</u> part of everyday life and it has both negative and positive effects <u>which</u> ~~this~~ is an issue that is very important for the future of young children.

First of all, the negative effects of using a computer for long periods <u>can not</u> be overlooked especially for young children. It affects eyes, so the use of glasses for them at an early age is inevitable. In addition, it has harmful effects for <u>physic</u> gesture of <u>body</u> and will <u>be caused</u> some diseases like backache and neck pain at old ages.

Moreover, most of the young children use <u>computer</u> for playing games. Playing several hours in a day causes <u>they</u> <u>have</u> <u>become</u> addicted to <u>the</u> computer games which in turn leads to avoiding <u>from</u> social activities. For instance, the <u>blue whale</u> is a game that ~~consisting~~ consists of a series of <u>task</u> assigned to players by <u>administrator</u> over a 50-day period and at the final stage <u>requiring</u> the player to commit suicide.

In spite of this, positive effects of this issue must be considered. They can gain a lot of information <u>from</u> the internet. However, parents must control their children's activities. Next, ~~the~~ computer skills are extremely useful for <u>work future</u> of children. They can find more suitable jobs in future.

So overall, I believe that parents should monitor their children's activities and inform them of the advantages and disadvantages of the internet and the virtual world.
