

Some people believe that nowadays we have too many choices.

To what extent do you agree or disagree with this statement.

Nowadays, ~~the~~ technology has been enhanced significantly compared ~~d~~ to the past. Therefore, its positive impact on people's life can be observed clearly all over the world; for instance, providing more various choices in different situations such as education, shopping and transportation.

In my opinion, ~~the~~ technological improvements ~~s~~ ~~has~~ ~~have~~ ~~facilitated~~ ~~made~~ ~~possible~~ several choices in life for example, availability of studying various kinds of majors at different universities and colleges. Those who want to graduate from ~~a~~ specific university will achieve their aim through attempting a lot particularly through connecting ~~to~~ professors who work at related faculties. Moreover, online virtual education plays an important role today since most of the students are employees ~~s~~.

Furthermore, in terms of shopping, there are a large number of malls in most of the countries especially in big cities. Recently, people can access several types of products and brands more easily than the past. Last but not least, online shopping is another main factor in buying necessary items that leads to saving time which in turn brings about performing other more activities during ~~a~~ ~~the~~ day.

On the other hand, the transportation system has been developed during recent years. People can use different kinds of means such as the subway, buses and taxies. I strongly believe only if everyone use ~~s~~ ~~the~~ public transport rather than private car ~~s~~ will the traffic decreased ~~d~~ dramatically all over the city, so the mentioned advantage meaning ~~existing~~ ~~the~~ ~~existence~~ ~~of~~ more choices for transportation can reduce the huge amount of air and noise pollution considerably.

Consequently, further to the above explanation, people have too many choices in order to ~~provide~~ ~~meeting~~ their requirements in life.
