

Today there are a wide range of household equipments available (TV, microwave, rice cooker) rather than before. Is it a positive development or negative?

,Thereby

Today's world is filled ~~with~~ with various appliances. most if not all, people are using modern household equipments which ~~are~~ is designed to ~~ameliorate~~ facilitate ~~lifethe condition of life~~. When the question arises as to whether different appliances are good or not, ~~my~~ my contention is that for changing our hectic life to an easy going ~~life-style~~ one, we need to accept some adverse outcomes ~~brought about~~ brings with modern equipments.

Although modern development in technology used in equipments ~~to a large in~~ immense degree could have beneficial improvements in our comfort but many critics, ~~also as well as~~ environmental activists claim ~~that there are the~~ adverse outcomes ~~withof~~ with new technologies. Privacy observers believe that invasion of privacy happens ~~time and again~~ time and again due to connected devices to the Internet, they believe that we are making a dystopia which everybody should feel anxiety about being tracked. ~~B~~ because even the most banal-seeming data can be ~~mined~~ mined ~~minded~~ minded by the surveillance economy. Even data from a smart toothbrush would be interesting for an insurance company which seems to be infuriating not only for people who ~~are~~ concerned about their privacy but also for people who are cavalier about it.

To put it in a nutshell, I personally have a moderate view and opine that new devices are the pioneer of making our daily basis easier and they can also entertain us in some ways. We need to admit that for some relaxing moments when our job is done by some equipment we need to spend and share some data. Some people accept to live in a commercial panopticon world but some do not.
