

Nowadays, we can see a huge number of online tutorial platforms and courses aiming to enhance humans' knowledge. although the trend of using these online courses is upward but I believe there is always a room for traditional schools.

On the one hand, wide-spreading Internet and technology and developing the open source data make learning easy and inclusive for everyone around the world which is one of the most important achievements of the 21th century.

In contrast, the Traditional system of training have a lot of undeniable superiority, providing government frequently keep it uptodate and revise it in order to increase its efficiency. enforcing to-presence in classes is one of the most important advantages of traditional System. as pupils are in class they where-are in an atmosphere of learning which causes s paying-more attention. besides questions that are asked in the class by other Students could help to get/understand the subject better and also having exam makes pupils to-study deeply, although, some of the online platforms take-give exams, cheating in them is easier than traditional ones, therefore in compare-comparison with the online courses licences and traditional courses licences, the latter are more reliable for many companies.

Overall, developing different typess of online study-based platforms and systems are-is useful to increase humankind's knowledge, providing-if a person has no access to university or school and also for people who are eager to learn different topics is ultimately great but I believe it should not take the place of the traditional system of study place.
