

The colleges is one of the significant educational systems in each country. Some think the tuition should be free in some subjects, which are related to society, however others believe the students should pay the university fees for irrelevant subjects with the government.

Some people argue the government should pay the university fees at the universities. It ~~cause to~~ eliminates discrimination among educational people, who abandon their education because they ~~can~~ ~~not~~ cannot pay their tuition. These students find a good ~~opportunities~~ opportunity to pursue their education and acquire a skill, which can influence ~~on~~ their job opportunities. Besides, the scientific level of society will be dramatically improved and the number of educated people will be increased because of the money, and they get a better chance to select or work in their favorite majors.

Some citizens believe the students s should pay the university fees. There are a few students, who are wealthy and have no problem to pay the tuition, but the normal students have to choose a major that they might dislike due to ~~less~~ lower fees or if they study their favorite subjects, the students should work simultaneously ly with their education, so they have more motivation to continue their educate- education of their studies. In addition, the university fees ~~make~~ create a ~~compet~~ competitive environment ~~place~~ for students, ~~who compete with each other~~ to get government funding because the governing privileges ~~assign~~ select the ~~excellent~~ outstanding students to cover their expenditure and their insurance.

As a result, although the public believes in paying to pay the tuition, I definitely agree with those, who think the university fees should be free especially for indigenous people.
