

Some people say that the main environmental problem of our time is the loss of particular species of plants and animals. Others say that there are more important environmental problems.

Discuss both views and give your opinion.

It is often debated whether the extinction of special groups of plants and animals ~~are-is~~ the main reasons that ~~has~~ endangered our environment or there are more serious issues ~~to-for~~ the environmental ~~problems~~. While I do agree that the threat of extinction is an important subject, I believe this is not a reason but a repercussion which ~~are-is~~ caused by other factors.

First, the pollution crisis has been a very crucial factor these days by which many species of animals are put in danger of ~~being wiping-wiped~~ out for ever. For example, many types of fish living in the rivers next to the cities are being killed by chemical residuals which ~~are releases-released in~~ the rivers' ~~waters~~ from the factories. For this reason, solving the water pollution should be the primary ~~criterion-objective~~ for the world without which the life of many creatures cannot be ~~survived-sustained~~ anymore.

Another point is ~~the~~ global warming ~~problem~~. Annually a vast amount of greenhouse gasses ~~emitting-emitted~~ from car fumes and big factories ~~have-has~~ caused many plants and trees to be ~~diminished-destroyed~~ and propelled the earth to a great risk of long-lasting draught. Therefore, the world has a pressing need for many environmentalists, who urgently educate the public to behave more friendly ~~to~~ ~~ward~~ the earth in order to save it for our future generations.

In conclusion, although animals' extinction and plant shortage are currently urgent problems which need to be taken seriously, we should never lose sight of other issues which are even more serious due to being the factors of such consequences. To put it simply, we people should consider our surroundings as a precious gift and collaborate in conjunction with each other to save it from any detrimental threat worldwide.
