

Question :In many places ,new homes are needed ,but the only space available for building them is in the countryside .Some people believe it is more important to protect the countryside and not build new homes there .What is your opinion about this?

Answer:

During the modernization of cities ,the fulfilment of making ~~the-a~~ balance between ~~the~~ environment and construction operations ~~have-has~~ been a bone of contention and different approaches were taken during the time in numerous countries by governments.

Many countries have taken ~~deconstructive-unhelpful~~ views toward the issue which ~~has~~ endangered their environment and wildlife but some others who were more tactful prefer to ~~plane~~ their city development and construction projects according to principles of sustainable development.

The devastation that occurs by projects which neglect the importance of ~~the~~ environment these days demonstrates ~~s~~ its impact on the life of humans, and ~~the~~ media struggle to raise social awareness ,at ~~least~~ ,~~arouse~~ the attention of the public to the issue ~~despite,although~~ some governments and authorities ~~which~~ still ~~tries-try~~ to somehow justify their plans.

My notion regards the priority of building new houses or preserving the environment far outweigh on the importance of environment because having even the best home without a safe and healthy environment will not be pleasurable .For instance ,in some states ~~wisely~~ projects cause the probability of more floods that lead to a hazardous predicament.

All in all ,I believe that for any project including building new houses near cities ,environmental concerns should be measured and if need be the construction process should be alternated ~~d~~ by other ~~planes-plans~~ which are more ~~competent-compatible~~ with the environment
