

**in a** number of countries, some people think it is necessary to spend large sums of money on constructing new railway lines for very fast trains. Others believe the money should be spent on improving existing public transport. Discuss both these views and give your own opinion

Saying that spending national budget on building a fast train system, people believe that **the** fast train is crucial for cities' transportation. Conversely, others think that governments should improve **the** existing public transportations. Although in my view national budget should be spent equally on **the** fast rail system and **the current** public transportation, this subject sparks a great controversy among people.

Nowadays, people are of the opinion that fast trains are more beneficial than other old-fashioned transportations especially for big cities and countries where people want arrive **to-at** their destination as soon as possible. For instance, big cities such as **new-New** York, İstanbul and shanghai grow fast in terms of space. Also population in these cities increase day by day. Because of **lake-lack** of proper and **a** high speed transportation system, people find **it** a big challenge to travel and get to work on time every day. Trains can carry a great number of passengers and goods at a time in comparison with other systems. Plus high speed trains can reduce the traffic congestion and **it-they areis** safe as well.

On the other hand, others think that a high speed rail system has a high-tech technology, so **some-narrowfew** countries can install this system properly. Therefore, investing in high speed rail transport has **involves** a great cost and for this reason many countries cannot pay this money at a short time. Totally the government should concentrate on **the** existing public transportations and solve their problems instead of investing in new trains.

In conclusion, in my view nations should spend money **in-on** both high speed trains and **the** existing transportations equally. In the future in consideration of growing population and cities' space both actions are needed.
