

I intend to focus on legal efforts to address climate change and global warming. The main question in this thesis is how we can manage to some extent to strike a balance between using natural resources and protecting the environment. In this research, I intend to look for the successful examples of legislative actions the governments have taken in most environmentally-friendly countries. Also, I want to concentrate on climate engineering which is commonly referred to as geoengineering and its benefits on climate change and environmental risks in connection with countries' rights and rules to assist developing countries in being more environmentally friendly by using or avoiding this method.

protecting the environment in Iranian constitutional law, course paper, Research Project II, Islamic Azad University, Tehran Central Branch, 2018. –
