The world is consuming natural resources faster than they can be renewed. Therefore for it is important that products are made to last. Governments should discourage people from constantly buying more up to date or fashionable products

To what extend extent do you agree with the statement above?

Now<u>adays</u> days, running out of natural wealth is far from of public awareness, and governments, N.G. Os and people are worrying about that. Even though some of <u>the</u> natural resources are renewable, <u>consuming</u> is faster than their <u>resumerenewal/recycling</u>. For instance, <u>now_nowa</u>days the total area of the earth covered by forests <u>are_is</u> less than <u>that of the</u> jungle <u>area_in_30</u> years ago. <u>Any</u> <u>Increasing_Increase_in_the</u> population <u>is causing_causes_increasing demand for the productions_products</u> that use natural resources as their raw material.

At times, everyone are is responsible to save this these resources for next generations. Governments should entitle impose heavier taxes on the industries for more tax if they use from natural resources, in the same way they imposed restriction on consuming in of unnecessary productive products and increase people's awareness to avoid from consumerism consumerist life style. This method can be useful in, an otherwise natural resource disaster.

In some case<u>s</u>, natural resources can be replaced with synthetics material; as <u>an</u> example unnatural leather; , wood or cotton that was made by chemical material<u>s</u>. The critical point is that it is necessary to find sustainable material for replacement; if not we will be face with new environment<u>al</u> crises. <u>crisis</u>

Fashion is one of the past decade's rare economic success stories. Not only <u>have</u> huge <u>amounts_numbers</u> of job seekers <u>were_been</u> hired in this industry, but also many entrepreneur<u>s</u> have invested in design, manufacturing and <u>the</u> selling branch of vogues. And this industry <u>are_depends on consuming_consumerist_culture</u>. If governments want to support <u>the</u> fashion business, it will be necessary to encourage people to buy new <u>productionproducts</u>.

In my view, governments should encourage industries to replace their <u>natural</u> <u>resource-based</u> production with synthetics materials which are sustainable and dose not damage the environments, in addition to <u>save saving</u> natural resources, <u>and</u> plan to protect and save natural resources.
