

Explain some of the ways in which humans are damaging the environment. What can governments do to address these problems? What can individual people do?

Such are the negative consequences of our activities on the environment that, many experts agree that destroying the environment poses a direct threat to humanity. As a result, we should tackle this problem with some constructive approaches both individually and governmentally. This essay will discuss some harmful activities for ~~the~~ nature and will come up with some solutions to solve or alleviate this problem.

Environment-wise, air pollution is a terrible issue which occurs when a myriad dangerous quantities of substances are introduced into earth's atmosphere. Sources of this issue includes many gases which which greenhouse gases are the worst air pollutants. These gases are related to ozone layer depletion and global warming directly. Generally, greenhouse gases is released when fossil fuel is burnt. Moreover, the another underlying causes of the problem is-are deforestation and ~~destroying destruction of~~ natural habitats due to our need ~~to-for~~ more land to solve overpopulation in metropolitan cities around the world. Governments can address this issue by bringing in new policies to split population over their cities and people can use green energy instead of fossil fuel.

The ~~an~~ other environmental problem is extreme use of plastic which has irreparable damages ~~on-to~~ the environment and wildlife in particular. Initially, plastics is harmful for animals because they eat it and feed it to their children ~~in-by~~ mistake. In addition, this material could poison our food chain as many animals eat it ~~in-by~~ mistake/mistakenly. An effective solution could be recycling all plastics that we use. Governments could encourage people to split up their wastes and also they could build recycle ~~factory-factories~~ around cities.

To make a long story short, as far as environmental problems are concerned implementing some solutions for each problems s by both governments and people could prevent large-scale destruction in the environment and save humankind.
