

Task2 :

In many countries these days, the number of people continuing their education after school has increased, and the range of courses at universities and colleges has increased too.

Do you think this is a positive or negative development?

The popularity and importance of knowledge and awareness in societies has increased over the past decades. The growing number of universities' population is per se a great evidence for this phenomenon. I would argue that the more cultured and skilled communities, the easier and faster societies' developments and improvements will be realized.

Firstly, the changing world's requirements necessitate individuals taking step towards being more involved in the present developments and technology by pursuing their education to high levels. The newly emerged-emerging issues and situations which did not use to be even 50 years ago need to be massively paid more attention to and studied by students and researchers. As a result, the recently introduced courses are massively found interesting, applicable و کار بردی و کار and detailed to be taken in colleges by pupils. Not only are these classes highly consistent with the developing global environment, but thanks to the variety of course, they are greatly considered powerful means for individuals to achieve their goals which seems s more appealing and favorable to them. In brief, universities being full of courses populated with an increasing number of students would be a reasonable answer to our current global circumstances as well as persons' inner satisfaction in the long term.

Secondly, requiring more updated-up to date knowledge than before, jobs play an effective role in starting and encouraging this trend .it is no longer sufficient to just work with your dad as his heir to keep his legacy alive. To do this, a lot of books and articles should be read. On the other hand, technology has pretty much altered everything in every aspect of our life with more practical ones. So to keep up with it, it is an inevitable fact that universities and colleges standing at the front line prepare and equip individuals with the essential knowledge and awareness which are needed by occupations as well as in daily life. Bringing more convenient-economic convenience in terms of economic situation, this way eases people's life similarly as it has been easing for years.

By way of conclusion, an ever-increasing number of people pursuing higher education in universities in which courses with more variety are offered cater to our societies'society's progress as much as persons' private person's-life.
