

Some people think that genetically modified (GM) crops are a positive development. Others, however, argue that they are potentially dangerous. Discuss both these views and give your own opinion.

GM crops have been in the center of discusses all around the world ~~in~~ several years ago. Some people claim that GM production have brought more plenty of advantages. Although, ~~another others ones~~ believe that genetically modified crops /such product have had negative effects.

On the one hand, people who are in favor of this method ~~to~~ argue that these production ~~be are~~ used to make different types of medicines, so, many people have survived by using these drugs. Furthermore, they have ~~been~~ caused plants have to grow faster ~~growing~~ with much more crops that they have supported to feed people. In my opinion, increasing products may have dangerous effects during our life. Now I can understand the main reason of people for buying organic food.

On the other hand, people who ~~opposite~~ oppose this ~~method~~ wise to worry about the long term negative effects of this production on human health and the environment and ~~function~~ efficiency of people. In my view, this method of ~~generate~~ generating food production is not useful in our life.

In conclusion, GM crops have advantages and disadvantages in our life. For instance, using them for making drugs can ~~have been~~ be useful for some several ~~disses~~ diseases. Although, they ~~will/may~~ behave ~~introduced~~ potentially harmful in the long time ~~toon the~~ human health and the environment. Surely, scientists should ~~have been~~ conduct different kinds of studies about this issues before their use ~~increases~~ increasing use them by people.
