

Do you agree or disagree with the following statement? It is a waste of money for the government to fund space travel or space exploration.

Nowadays people's tend to travel in space has increased and throughout the history it has been ~~they~~ their dream as well as in many fictional stories. Some people argue that investing in this sphere ~~have~~ has long-term positive effects but some reasons persuade me to put forward that governments should not spend a lot of money on this area which I will explain with a couple of examples.

At the outset, there are vital issues on the earth which precede space travel such as air pollution, wars, financial problems that governments should consider ~~on them~~ at first. For instance, developing countries whose people are in poverty cannot attend space exploration owing to the fact that/because most government investments are provided ~~of~~ with their people's tax/at the expense of the tax payer and when people are in poverty they cannot pay their tax, so if governments exert pressure for receiving people's tax, it causes people to be dissatisfied ~~from~~ with their government.

Another point is ~~that~~, this is an issue ~~that~~ which is researched every day and scientists' knowledge of this subject is not complete yet, so lack of adequate knowledge about this sphere/area/field may increase the risk of failure, so we should improve our knowledge first and then spend on it. For example, if governments ~~more~~ invest further in space education, it reduces errors in the manufacture of related equipment which will be conducive to government spending in this area in the future.

To recap, although investing in space travel and space exploration can be beneficial for the future of humanity, there are more important/pressing issues in the world that are necessary for survival of humanity and besides investing in some subjects which we did not have enough information about, it is not convincing to make this investment, so if we enhance our knowledge, we can decrease the risk of failure.
