

The government wants to make investment to improve education. Which one of the following investments do you think is the best?

1. to hire more teachers to teach in small classes

2. preschool education before kindergarten

3. to provide some training courses so that teachers can be more professional

No one can ever deny the significant role of governments ~~on~~ in improving education and the question of how they can improve it has been debated for many years. Two reasons persuade me to put forward that investing ~~on~~ in preschool education before kindergarten can ~~give~~ produce a beneficial result which I will explain with a couple of examples.

At the outset, this ~~function~~ approach is less expensive than other ones because hiring more teachers and ~~provide~~ providing training courses for current teachers need a huge amount of money. Creating courses needs some professional individuals as a teacher which means translates into ~~that~~ a lot of money. For example, it is extremely costly for developing countries to ~~present~~ offer child psychology and personality classes, because they ~~did~~ do not have an expert person ~~on~~ in their country, so they have to bring someone from abroad which is too risky in terms of security and ~~costly~~.

Another point is that children can learn various activities when they are in the first years of their life which would be beneficial for their future life that education is no exception. For instance, they can learn how to communicate with others before ~~they~~ going to school or in their plays in kindergarten and even they can learn how to cope with their problems which is conducive to being more independent pupils in future.

Last but not least, by training children before ~~they~~ going to school, governments would have law-abiding citizens ~~on~~ in the future because children who do not reach the age of reason are less rebellious owing to the fact that they cannot distinguish between right and wrong, so they follow in their footsteps. For example, if people learn the ~~road~~ traffic laws on ~~at~~ their young age, they will be the appropriate drivers in the future.

To recap, investing ~~on~~ in preschool education would be more practical because it has some advantageous points for governments and also the cost is ~~trivial~~ minimal/negligible compared to other ~~selections~~

options/choices and the noteworthy point is that children can learn pleasantly diverse functions when they are ~~at~~in their first years of their life.
