

Do you prefer to take a course taught by a professor with whom you have not had classes before or a course taught by a professor whose class you have taken before?

~~It is crystal clear that~~ no one can ever deny the significant role of professors' on students' life and ~~from my viewpoint~~ these kinds of questions can have variable answers because it depends on people's personality and their situations. Some reasons persuade me to put forward that ~~take~~ taking courses with several professors is a better option which I will explain with a couple of examples.

At the outset, you can learn diverse subjects in various spheres when you communicate with different people, so it is obvious that each professor has a unique way ~~for~~ of teaching, so you can face new ways which provide more chance to adapt you to new methods and conditions and it is a pleasant opportunity to become familiar with numerous perspectives. For instance, if you have young lecturers rather than older ones, you would be using ~~by~~ new technology to exhibit your lessons such as using Powerpoint in your class presentation or your young masters' outlook will be in line with the current state of your society.

Another noteworthy point is that not each professor ~~cannot~~ be a specialist ~~specific in~~ on each field, so it is a given fact that taking a class with different professors helps students to learn new issues which the previous professor ~~does~~ may not know. For example, your civil ~~masters~~ teacher/instructor cannot teach you physical education or dance history owing to the fact that there is not in their area.

To recap, for students' success we need various professors who are professional in their spheres. Besides, it can be more challenging for students, if they are not ~~be~~ familiar with their new lecturers and also they can communicate with different masters ~~by~~ with diverse perspectives which can aid pupils ~~to~~ in adapting themselves ~~with~~ to new strategies, so these conditions can be more beneficial for students' future.
