

People in communities can make decisions that protect and improve the natural environment. Which one of the following three actions is most useful people to do if they want to help the environment in their local community? Explain why?

1. Plant trees and create parks
2. Persuade local shops to stop providing plastic bags to customers
3. Increase access to public transportation (for example, buses or trains) to reduce the number of automobiles on local roads.

It is obvious that nowadays preserving ~~of the~~ natural environment is one of the striking concerns for countries and also they suggest diverse solutions ~~of~~ which the most impressive ~~of them~~ are mentioned in the statement. From my viewpoint all these three points are adequate per se and they must be combined for a pleasant result but the third option ~~is precedes the than~~ others in terms of importance and some reasons persuade me to put forward this view which I will explain with a couple of examples.

At the outset, by increasing reach ~~of~~ public vehicles the traffic in cities will be waned which is conducive to diminishing people's tiredness and preventing them from wasting their time. For instance, bus rapid transit is a relatively fast, efficient way which moves ~~s~~ millions of commuters and individuals ~~who~~ by using ~~of~~ it do not ~~require~~ looking for parking space.

Another significant point is that ~~using use of~~ public transportation ~~via~~ ~~by~~ people ~~decreases~~ the air pollution ~~decreases~~ whereby diseases and health problems which derive (stem) from this point will be reduced, so it is beneficial for people. For example, air pollution has ~~enhanced-increased/raised~~ the number of people who have asthma, so in my country by setting rules about using cars in specific days, air pollution and health problems ~~have been~~ reduced.

Last but not least, public transportation is more economically advantageous ~~compered~~ compared to personal vehicles because it leads you to save more money for refueling. Today's world is encountering ing recessions, so people need to save more money for tough conditions.

To cut a long story short, utilizing public transportation is not only practical for ~~waning~~ reducing traffic but also ~~is~~ beneficial for people's health and besides, it is more economically ly.
