

Can ~~be~~ computerized data collection on individuals be justified even though it endangers the rights of individuals? 111

Nowadays, easing ~~the~~ works, ~~using~~ computers and I.T are being improved and all of the activities and daily jobs are affected by this technology such as manufacturing materials, analyzing information as well as accumulating data. ~~despite~~ ~~Though~~ the widespread use of electronic archives of individuals' data, people are ~~worry~~ ~~worried~~ about ~~the~~ abuse of information.

On the one hand, information technology and using data storages can increase the efficiency and pace of the jobs especially in the field which are related to ~~societies~~ ~~society~~ and people's information. For example if we have ~~a~~ comprehensive data regarding ~~to~~ men and woman's health situations and the background of their medical problems such as their childhood disease or blood group, it can be useful in emergencies ~~events~~ and it can ease ~~s~~ ~~diagnose~~ ~~diagnosing~~ people with any health problems. Moreover, decreasing rework cost, digital data can ~~be~~ ~~used~~ by many organizations. For instance, the information of vehicles and their owner are applicable for polices, municipalities as well as tax offices. Knives are used to cut meat

On the other hand, ~~the~~ ~~increasing~~ ~~increase~~ ~~in~~ the abuse of information is one of the reasons that ~~leads~~ ~~to~~ people ~~to~~ being ~~worry~~ ~~worried~~ about their personal data which are available in electronic databases. Hackers are enthusiastic ~~for~~ ~~about~~ taking the information and ~~misuse~~ ~~misusing~~ ~~it~~ ~~that~~. That's why governments and other organizations which are responsible for those electronics' archives have to deal with ~~this~~ ~~these~~ problems by increasing their securities criteria. Hiring sophisticated programmers as well as using the modern software such as firewalls can increase the security of their database. In addition, governments have to set strictly ~~securities~~ ~~secure~~ standards in networks and databases and supervise and control the observance of it.

All summed up, I believed using computers and digital data is inevitable and both ~~of~~ the governments and organizations have to take proper actions to decrease the possibility of any misuse of data.

It leads people to worry

It leads to people worrying

It leads to worrying
