

Nowadays the way many people interact with each other has changed because of technology.

In what ways has technology affected the types of relationships people make? Has this become a positive or negative development?

These days ~~with the advent of~~ ~~by becoming~~ new technologies, ~~the~~ communication and interaction among individuals have changed in comparison with ~~the~~ past. These kinds of changes have affected ~~on~~ social interactions. In ~~this regard that~~, not only ~~have they does-~~ ~~it make~~ ~~made~~ distances shorter, but also simplified communications. Obviously, each additional change that occurs has some merits and demerits.

First of all, the face of communications in comparison with the past has been changed ~~with by~~ the advent of new technology. As a case in point, let's look at some decades ago. Individuals for making communication utilized other ways such as conveying messages by horses, birds and others that took more than several months until a message arrived ~~to at~~ its destination, but now it is possible to send messages to far distances even to another country less than a second.

However, on one hand, the internet as an advantage of this evolution in the present era not only has accelerated the pace of development in every facet of our life, but also has ~~eased~~ ~~made~~ international communication and even international transaction ~~more-~~ ~~easily and smoothly~~. On the other hand, apparently these kinds of changes have some disadvantages in social and personal interactions. In this respect, although ~~they have it-~~ ~~has~~ been facilitated to ~~make~~ communicate with each other, people more likely stay at home and avoid face-to-face interaction.

To sum up, from my viewpoint, although the pros of new technologies ~~iesy~~ surpass ~~their its~~ cons, we should ~~have/create/restore /~~ make equilibrium between using new ways and traditional ones for our communications.
