

## Is it good for women to work outside of home do you agree or disagree?

Nowadays, a current issue ~~the hottest news~~ around the world is about attendance of woman in society.

Authority figures state that woman are so impressive in society and they can play a significant role ~~in~~ outside of home .it makes them up-to-date and traditional protocol will be demolished. The amount number of financial pressure and recession is are widespread ~~widely deployed~~ and we must invite women ~~an~~ for presence in negotiations and assemblies. Because of that just working of one person in a family cannot sustain a living ~~can not ways and mean~~.

In addition, some advocates of human rights state that men and woman are equal correspond to each ~~earth~~ other. Beside ~~In side~~ the man, women have new ideas and they have made a lots of invention. thus, they can make profound change in modern lifestyle .

Thirdly, staying at home without any program is boredom and makes them broody.it creates a bad belief ~~believe~~ in them that they are not useful and independent and for continuing their life they should regard ~~to~~ other people.

In contrast, many men ~~man~~-virtually disagree with working of women and they say women become old sooner than man and if they work outside in fact they do not have enough energy to share with the family, they cannot ~~can not~~ spend time nurturing ~~en-nerchering~~ /raising their children .they ban and restrict women in homes and they say women's ~~s~~ priority must be family and housing.

In my opinion, women are so wise and they can handle both family and outside work but it is better to work outside with time limitation to do every thing in order. Women have authority to choose their favorite lifestyle.

Consequently, we cannot ~~can not~~ ignore women in the community, we must respect ~~to~~ their ideas. Without women we cannot ~~can not~~ reach our goals. Not only do we need their guidance but also their emotion, they are precious ~~pure gold~~ and we must heed keep their advice for now and next generation.
