

Zara Izadi

Nowadays the way many people interact with each other has changed because of technology. In what ways has technology affected the types of relationships people make? Has this become a positive or negative development?

Every technology technological development brings along its positive and negative effects. People's relationship is not supposed to be an exception and even one of them which has been a heated debate recently. This essay will outline both positive and negative effects.

To begin with, a few of the positive features of technology on relationship are accessibility, networking and communication. People are easy to be reached throughout the world anytime, anywhere. Geographical distance which was regarded as one of the colossal barriers to effective communication has been broken and a variety of software and applications are servicing being served to enhance the quality of faraway communications. These days even people in remote areas updates their information about all over the world which can be considered as another merit of technologically development.

(On the flip side, however,) However, on the flip side, there are negative impacts to mention as well. It is undeniable that Technology, to some extent, extend has reduced the social interactions. Family members spend spent much less time together and even while they may physically be present sometimes, their heads are ore on their iPad or cellphones, networking, tweeting or playing games. Even sometimes, it goes as far as /(further to where) they get addicted to this virtual communication. Consequently, this kind of relationship lacks that strong bonding among people.

To recapitulate, our life style faces changes into a more developed and (more) convenient one. This is a double-edged sword which that if we are aware of each, we can consider its merits and harms and manage it in a well-balanced way.
