

83. Do you agree or disagree. Modern technology is creating a single world culture

Modern technology is rapidly changing the world's living standards ~~which that~~ results in creating a single-world culture. New technologies such as ~~the~~ Internet, television, electronic media, transportation, ~~etc has have~~ a great impact on creating a similar culture all around the world. ~~Below Bellow~~ I will list my reasons to support my opinion.

First of all, ~~the~~ Internet and e-mail have changed the way people communicate ~~with to~~ each other and ~~have made make~~ it easy. ~~The~~ Internet has many benefits. It is a new means of communication, a fast access to information and news. We have a great opportunity to find out more about other countries and their history. People communicate with each other, share their ideas, happiness and difficulties. My brother lives ~~in an~~ other country. I always keep in touch with him by ~~the~~ internet. We send ~~a~~ messages to each other every time we want and sometimes we have video chat ~~via the net, so by internet. so~~ it ~~has facilitated our life~~ (makes our life easy.)

Second of all, the modern means of transportation allows people to move from one place to another place very quickly. we can go downtown ~~in our with~~ own car, ~~by~~ taxi, bus and even metro. Or we can travel and visit around the world by airplane, train or ship. ~~Another~~ use of transportation is ~~saving surviving~~ people's life in emergencies ~~easy time~~ in ~~the~~ least possible time, so technology ~~accelerates~~ our life.

Finally, as a result of all mentioned above there ~~are is~~ no boundaries between ~~among~~ countries, their traditions and customs. Many people migrate during their lives. Some of them are looking for a better place to live ~~in,~~ others want to get new experience and knowledge or just pleasure, ~~so -So,~~ many families are created ~~by between~~ people from different countries, ~~so -so~~ technology causes ~~link~~ all countries ~~to come to~~ together
