

Every country has poor people and every country has different ways of dealing with the poor.

What are some of the reasons for poverty? What can we do to help the poor?

Penury is one of the main/biggest issues that the entire world has to deal with. All countries have been tried-trying various ways of facing on-the poverty/impooverishment poor. In this essay some of indicators such as unemployment and lack of education will be discussed, followed by recommendations to address the issues at hand.

Admittedly, unemployment has a great impact on creating poverty. Since living expenses need s earning money, it will be destructive when a person who is the bread-winner could not fulfill it. Therefore, a person and his/her family will encounter many money problems and it is increasing day by day. As a consequence, they have no income as well as no money, even for their basic needs and it raises poverty. This condition not only makes exerts/has a lot of pressures on family, but also brings negative effects on the whole society.

Another reason which convinces me to support it is lack of education or good skill. It would limit people's ability to access decent jobs to develop themselves and participate fully in society. In addition, it would lead to make few options for them to pick/choose a job with low salary for them which also results in (leads to) not having enough money.

The former farmer problem can be effectively solved by increasing job opportunities with reasonable salaries. The latter problem would be resolved d by experts, they can do some volunteering works like having have classes for those people who are illiterate. In this regard, not only have they helped to their society to combat against poverty, but also have reduced improved the rate of literacy in their country.

To put it in a nutshell, it is our duty to eradicate poverty ~~poor~~ with long-term planning and short-term and make delighted life for the next generation.
