

In this day and age, the relations between people are undergoing many changes because of the technological enhancements. These improvements can be evaluated both positively and negatively according to the ways in which these alterations may occur.

First and foremost, discussing the modern relationships, the primary outcome of technological growth is undoubtedly the emergence of virtual social and communicational networks which have ~~has~~ revolutionized and redefined the concept of relations among people. This trend can be considered positive in terms of the quantity of the persons one may communicate with₇₂; in some cases however, it can degrade the quality of interactions with others. For instance, being on ~~f~~Facebook may provide the possibility of communicatinge to a sheer number of virtual and real friends, although ~~however~~, it can diminish the quality of the relations with beloved friends and confine it to virtual words written on their walls and private messages and consequently prevent them from having face to face conversation. Such a trend can be evaluated positively for those people (who are) living far from their family and friends as it decreases the sense of loneliness and homesickness.

The other key impact of technological improvements on modern relations is the/this fact that because of technology people tend to lead sedentary and hectic lifestyles so that they get too busy to interact with their friends or family. One of the direct consequences of such a pervasive attitude is that people drift apart gradually.

In a nutshell, the effect of technology on relations according to these facts as to that how people utilize it, and who and in what context they are ~~is~~ influenced ~~by~~ and eventually whether their relations have become over-dependent on technology or not, can be assessed as either a positive or negative trend.
