

The continued rise in the world's population is the greatest problem faced by humanity at the present time.

What are the causes of this continued rise?

Do you agree that it is the greatest problem faced by humanity?

There is no room for doubt that over the last century the world's population has been increased dramatically and despite the fact that we have many significant problems, this continuing surge will causes several devastating drawbacks on our world as well.

The Continuing increases in the number of humans causes more demands for food, so it encourages makes more and more usage of water, soil and pesticide for food production. Therefore, it leads to soil erosion and water shortage as well. Moreover, pesticides which are used in agriculture might have negative outcomes for the environment and ecosystem. Furthermore, every person needs a place for living live, so residential area shortage is another problem caused by population. Consequently, we need more construction materials such as timber, stone or metal. As a result, how to find enough materials is a matter of dispute, besides these problems, we can face several other problems such as pollution.

On the other hand, we are facing many other major problems. For instance, war is a one of the most significant ones, because not only does it makes many people die, but also it prevents each society from progressing. Likewise, terrorism, is the other problem one that we can overcome this problems, unless all the government try to eliminate it. Furthermore, we have many other problem such as the energy crisis or poverty.

From what has been discussed above, I may draw conclusion that among all these all problems mentioned and others that I have not written, over population is the greatest problem that we face, Bbecause other ones such as unemployment and pollution are caused by this increase.
