

It is important to ensure that children with a wide range of abilities and from a variety of social backgrounds mix with each other at school.

To what extent do you agree or disagree?

In this day and age, combining students from all social spectra and various practical capacities at a same school has become a major principal for many authority figures seeking to achieve **an** equality in accessing the educational facilities for **the** society as a whole. Having said that, however some argue it cannot be a wholly positive approach, since it can be conducive to a large number of problems for pupils who encounter **the** completely different ideas and life-styles facing neither their higher **nor** lower-class counterparts.

To begin with, reaching **to** this idealistic purpose **that which** all people should be able to utilize the same educational services, social planners have organized systems which **allows** all families to enroll their children in public schools without considering their social classes or students' merits. Thus, it can be beneficial for both weak and powerful pupils **s** due to the chance of learning from or teaching **to** a classmate which in turn can be extremely helpful in the process of **learning**. Moreover, not only can this attitude facilitate **the** public education, but also it can be regarded as a moral activity. For instance, public schools in my country give the priority to people who live nearby the school and not those mentioned factors.

In stark contrast, students may face cultural and economic differences among themselves and other peers which **may be** impact on their educational trend or their mental health. That is to say, it is common at schools which include a wide spectra of individuals that students attempt to display their families' **superiority priority** to other children through exaggerating their economic and social status. In other words, this kind of childish manner can **create make** complexes for other students who **are** belong to poor families. To make an example, formal

statistics reveals that more than half of the crimes which happen in schools have a direct correlation with deep economical gap among classmates.

In a nutshell, although it is an ethical objective to teach the whole people in the **a** same condition, it might cause problems that hurt both students and society.
